2W Fixed input voltage, 5000VAC or 6000VDC isolated & unregulated dual/single output

Patent Protection RoHS 3 years Warranty Continuous Short Circuit Protection

## FEATURES

- High efficiency up to 84%
- The leakage current < 2μA
- Isolation Capacitance as low as 4pF
- Creepage & Clearance Distance > 5mm
- Reinforced insulation, Isolation voltage: 5000VAC or 6000VDC
- Operating ambient temperature range: -40℃ to +105℃
- Continuous short circuit protection
- Meet EN60601-1, ANSI/AAMI ES60601-1 standard (1xMOPP & 2xMOOP)
- Meet IEC62368 standard

*G_S-2WR3 & H_S-2WR3 series meet reinforced insulation requirements. They are specially designed for applications where require compact size, high isolation, low isolation capacitor and low leakage current power. They are widely used in medical, electricity, IGBT driver and so on. They are suitable for:*
*1.Where the voltage of the input power supply is stable (voltage variation: ±10%Vin);*
*2.Where isolation is necessary between input and output (isolation voltage ≤5000VAC or 6000VDC);*
*3.Where do not has high requirement of line regulation and the ripple & noise of the output voltage;*
*Such as, medical collection isolation, high voltage collection circuit and IGBT drive circuit.*

## Design Reference

### 1. Typical application

Input and/or output ripple can be further reduced, by connecting a filter capacitor from the input and/or output terminals to ground as shown in Fig. 3.

Choosing suitable filter capacitor values is very important for a smooth operation of the modules, particularly to avoid start-up problems caused by capacitor values that are too high. For recommended input and output capacitor values refer to Table 1.

The simplest device for output voltage regulation, over-voltage and over-current protection is a linear voltage regulator with overheat protection that is connected to the input or output end in series (see Fig. 4).

## 3. Minimum Output Load Requirement

For a reliable and efficient operation of the converter, the minimum load should never be less than 10% of the rated output load. If the total required output power is below 10%, a parallel bleeding resistor is required on the output, ensuring that the sum of the power consumption is always maintained at 10% minimum.
